

Merry Maids® helps protect your home and family

Enhanced disinfection services help ensure your family’s wellness and reduce the risk of virus transmission. Not all household cleaning items are effective at eliminating harmful viruses and bacteria and reduce the risk of virus transmission in your home. Even if products are effective, they must be used frequently in the right manner and on all appropriate surfaces and items. Our disinfecting services are available for high-touch, non-porous surfaces in your home to protect you and your family.

Our service – your safety

Safety is our top priority so all teammates who enter your home will be wearing personal protective equipment, including masks, gloves and shoe protection.

Our highly trained cleaning professionals will inspect and disinfect high-touch, non-porous surfaces in your home.

Our treatment uses a commercial-grade disinfectant that is EPA-approved to kill known viruses and many pathogens, including harmful viruses and bacteria.

We have enhanced safety and cleanliness protocols, including regular cleaning and disinfecting service equipment to avoid cross-contamination.

Merry Maids is considered an essential business based on our residential sanitization efforts. Protect your family with this special service as a stand-alone disinfection service or to complement any regular or one time cleaning.

Merry Maids uses a digital thermometer to record the temperature of all teammates arriving to work every day and never dispatches any teammate with above-average temperature.

Enhanced disinfection services includes these areas:

- Countertops
- Toilet Seat/Handles
- Cabinet Knobs
- Light Switches
- Appliance Handles
- Stair Rails
